Introduction

Welcome to the YoutubeBrowser application! This program is designed to enable you easy browsing through YouTube videos. If you liked a video very much and want to save it for later, there is also a functionality for it. You can group your favourite videos into many custom playlists that are easily accessible afterwards. We hope you'll enjoy our application!

Namespace YoutubeBrowser

Classes

[AddVideoWindow](#)

Class which handles the functionality connected to addition of new playlists and addition of videos to the playlists.

[App](#)

Interaction logic for App.xaml. Represents the entry point for the application.

[MainWindow](#)

The main window of the application.
